EDUCATION

University of Malaya (Kuala Lumpur, Malaysia) **Oct 2023 – Present**
Bachelor of Computer Science (Information System) CGPA 3.87/4.00

Kolej Matrikulasi Perak **Jul 2022 – Jun 2023**
Pure Science CGPA 4.00/4.00

SMJK Krian **Jan 2017 – Dec 2021**
SPM - 8A (6A+, 2A)

PROJECT

EduPath - Automated Transcript Parsing and Predictive Analytics System (FYP) | Present

- Built a full-stack academic analytics platform (**Python/Flask, PostgreSQL**) that automates transcript processing, academic planning, and career guidance, with a **PyMuPDF** pipeline for extracting semester, course, grade, credit-hour, and CGPA data with human-in-the-loop verification, alongside a separate **anonymised analytics dashboard for university staff**.
- Developed **predictive analytics and AI-powered academic planning** for required GPA, target CGPA projections, what-if simulation, and Grade Tracker, with consistent results across the dashboard, simulator, planner, and generated reports.
- Built an **AI career-matching system** using Gemini for course-to-skill classification and cosine similarity against **O*NET occupation profiles**, supported by a UM-to-O*NET career mapping and transcript-grounded chatbot for personalised academic and career guidance; implemented privacy-preserving benchmarking and expiring report-sharing links.

QSolva - AI-Assisted IT Service Desk | Aug - Sept 2026

- Built a full-stack IT service desk (**React/TypeScript, FastAPI, PostgreSQL**) to solve fragmented IT support and repetitive troubleshooting, providing centralized ticket management, escalation, notifications, and SLA monitoring.
- Developed **a RAG pipeline with embeddings and pgvector** that classifies ticket priority and retrieves similar historical resolutions to recommend troubleshooting steps.
- Built a **knowledge loop** that uses resolution feedback and recurring issues to transform successful support cases into reusable Help Center resources.

QSolva – AI-Assisted IT Service Desk | Aug - Sept 2026

- Built a full-stack IT service desk (**React/TypeScript, FastAPI, PostgreSQL**) with ticket management, escalation, notifications, and business-hours-aware SLA tracking. Urgent tickets run on a 24/7 clock, and the clock pauses outside business hours for lower-priority tickets.
- Built a RAG pipeline using Gemini embeddings and pgvector cosine search. It finds similar resolved tickets and generates step-by-step troubleshooting suggestions, using both the ticket text and attached screenshots.
- Built AI priority triage with Gemini using a severity rubric that returns a confidence score and a reason. Admins can override it, and failed AI steps can be retried.
- Designed a knowledge loop that groups similar tickets into recurring issues as they arrive. It uses staff-confirmed resolutions as evidence to draft Help Center articles, which admins review before publishing.

VeriGate — AI Governance & Shadow AI Prevention Platform | Jul 2026

- Built a full-stack AI governance platform (**React/TypeScript, FastAPI, PostgreSQL**) with a **Chrome extension** that blocks unapproved AI tools and routes approved usage through a

policy-enforcement gateway, reducing risks from unmonitored "shadow AI."
- Developed a **real-time sensitive-data detection engine** that scans prompts and file attachments for PII, financial, and credential data, combining rule-based pattern matching with **Gemini-powered intent classification** to sanitize, hold for approval, or block risky content before it reaches external AI models.
- Built end-to-end governance workflows including **audit logging, risk alerts, employee appeals, and automated trust scoring**, with a Gemini-powered **Governance Copilot** for natural-language compliance queries.

ChillPick - Movie Recommendation System | Mar - June 2025
- Built a full-stack recommendation platform (**Node.js/Express, MongoDB, EJS**) that personalizes movie and book recommendations using **search history, user interactions, ratings, and reviews**.
- Solved the **cold-start problem** with an onboarding taste quiz and genre-based fallback recommendations, enabling personalization even for new users.
- Integrated **TMDB and Google Books APIs** and implemented supporting features including watchlist, viewing history, notifications and caching.

ACTIVITIES

Exchange Student
Chonnam National University (Gwangju, South Korea) | Sept - December 2025
- Participated in international student activities and cross-cultural programs.
- Completed robotics coursework and developed an autonomous self-driving car prototype.

Program & Protocol Member
UM Tech Night 2025 | April - June 2025
- Prepared event programme flow and coordinated event logistics.
- Coordinated emcee cues and managed guest seating arrangements.

Publicity Team Member
Programming League National 2025, Universiti Malaya | Mar - May 2025
- Draft and send targeted emails to student groups, sponsors, and tech communities.
- Plan and execute social media campaigns like countdown, sneak peeks of prizes or participant spotlights.

SOFT SKILLS

- Leadership, Team coordination, Time management, Teamwork

TECHNICAL SKILLS

Programming Languages
- Java, Python, JavaScript, TypeScript, SQL

Frontend
- React.js, HTML, CSS, JavaScript

Backend
- Node.js, Flask, REST API, FAST API, Docker

Database
- PostgreSQL, Supabase, MongoDB, Firebase

Tools
- Git, GitHub, Figma, Postman

SPOKEN LANGUAGES

Mandarin (Native), English (Conversational - MUET Band 4), Malay (Conversational)
